"About the Owner"

I started in this business back in 1983 as a junior detailer / material take-off person and worked my way up the ladder to running an iron division for a mid sized steel fabricator in NYC.

Back in 1995 was when I first became interested with CAD, just when the beginning stages of the internet and Microsoft Windows started. Since then I have used my CAD skills and many years of experience to work on some really complicated monumental stair projects.

With over 28 years in the steel construction industry, 17 years consisted of detailing, 3 years of estimating, 5 years of project managing and 3 years of managing an iron division.

I've estimated projects up to \$3,000,000 and managed projects up to \$1,500,000 in cost. Through out my career I have detailed some highly complex miscellaneous iron items and some structural steel projects. Most of the jobs that I worked on were high profile projects. The types of jobs consisted of approximately 75% rehabilitation and 25% new construction.

In 2001, I went on my own and started my own business using the computer to detail miscellaneous iron, ornamental and structural steel items on a fulltime basis.

I presently utilize Autodesk's AutoCAD Architecture 2012, SSDCP and Revit Architecture 2008 with my own custom library of details for preparation of shop drawings.

With all my years of experience and extensive knowledge in this field, I can provide my customers with various other valuable services. Such as design consulting, estimating, material take-off, field measuring and or project managing services.

Please take a moment of your time to visit our web site and view our extensive collection of CAD shop drawings, 3D DWF Models and finished photos of previously completed projects.
